

# GENSET CONTROL KEA 3X0 WITH ARABIAN LANGUAGE PACKAGE

The genset control KEA 3X0 already speaks many languages for international use. The extensive language package has now been extended by the Arabian language.

Standard texts for dynamic messages, such as alarms and thresholds, as well as discrete inputs and outputs of the KEA are displayed in Arabian.

The Remote Display RP 300 displays the Arabian texts as well.

## PARAMETERIZATION / COMMISSIONING

Necessary changes in the parameterization as well as the commissioning can be carried out by a simple language changeover in a standard language, if required. By selecting the „Arabian“ language, the Arabian texts are displayed again.

## TOOLKIT

The Toolkit program interface is still available in the standard languages, which can be selected during installation. However, via the Toolkit software, free texts can also be entered in Arabian on a project-specific basis.
